SUMMARY

Full-stack developer with production experience across the software development life cycle at BaroShift, building, testing, and documenting features on live systems. Comfortable with Java, SQL, Git/GitHub, and REST APIs (with Swagger/OpenAPI through FastAPI), and experienced providing application support by resolving bugs and defects. Disciplined, collaborative, and quick to pick up new tools, with a strong sense of ownership.

SKILLS

Languages: Java · TypeScript · JavaScript · Python · SQL · C

Web & APIs: React · Node.js · REST APIs · Swagger / OpenAPI (via FastAPI) · FastAPI · Tailwind CSS

Cloud & Tools: AWS (cloud computing) · Git/GitHub · Linux / command line

Practices: full SDLC · unit & integration testing · code review · technical documentation · Agile / Scrum

Spoken: English · Spanish · Tamil · Hindi

PROFESSIONAL EXPERIENCE

BaroShift (formerly MyTorso.ai) · *Full Stack Developer Co-op* — Vancouver, BC (Remote) · Jan – Apr 2026

- Engineered administrative dashboards from business specifications across the full SDLC: a React/TypeScript frontend over a Node.js/REST API with authentication, cutting manual account-management overhead by an estimated 40% for 3 teams.
- Tested and verified features before release, participated in design and code reviews, and documented technical solutions so the team could maintain the system.
- Provided ongoing application support by diagnosing and resolving bugs and defects, working in a Git/GitHub workflow in an Agile environment.

UVic University Systems, Computer Help Desk · *Computer Helpdesk Analyst Co-op* — Victoria, BC · Sep – Dec 2026

- Provide ongoing support for campus systems, diagnosing, reproducing, and resolving reported issues, and documenting each case and its resolution.

UVic Residence Services · *Community Leader* — Victoria, BC · Apr 2025 – Present

- Support a residence community of 60+ students, working in a team and building consensus through clear communication and collaboration with university staff.

PROJECTS

CoopLens · *Full-Stack App with REST API* — May 2026 – Present

- Built a full-stack app end to end: a Python/FastAPI backend exposing a REST API with Swagger/OpenAPI docs, SQL schema design over 200+ records, a React dashboard, and a browser extension integrating third-party APIs.
- Hit a hard deployment constraint and solved it within the limit, cutting footprint 95% (90MB to 5MB) while preserving quality.

ScholarU · *Full-Stack Platform* — May 2024 – Present

- Designed and built a full platform independently, from the SQL data model and API to the UI, cutting discovery time from ~2 hours to under 5 minutes; actively used by CS peers.

DermaCheck · *End-to-End Product Build* — Aug 2022 – Jan 2024

- Took a product from concept to deployment: built a Python pipeline and trained an ML model, with video calling and secure records.

EDUCATION

University of Victoria · *B.Sc. Computer Science, Software Systems (3rd year)* — Jan 2024 – Present

- Relevant coursework: Software Development Methods · Requirements Engineering · Algorithms & Data Structures I–II · Networks · Data Mining · Computer Architecture · HCI

JBCN International School · *IB Diploma (HL: CS, Mathematics, Physics)* — Jun 2021 – May 2023

- Extended Essay: 4,000-word research paper with controlled methodology and reproducible results.

CERTIFICATIONS & ADDITIONAL TRAINING

AWS Cloud Practitioner Essentials · *Coursera (authorized by Amazon Web Services)* — Jun 2026

- Core cloud services, security model, and infrastructure, transferable to PaaS and cloud platforms such as Azure.

CS50 · *Harvard University (Online)* — Jun – Sep 2022

- Scored 98%; built proficiency in C, Python, SQL, JavaScript, and HTML/CSS. Capstone: 'Smart Unlock' facial-recognition app.
